

Your advantages

With a used machine from CMS, you get the finest in machine construction. Prepared and made fit for a new machine life, at a price which makes it more than appealing to enter the CHIRON/STAMA class.

10 good reasons for a used machine from CMS:

- CMS focuses on used machining centres of the trademarks CHIRON and STAMA, and is the largest specialist for used machines of these international trademarks
- CMS is a subsidiary company of the financially strong and internationally successful CHIRON Group
- It goes without saying that CMS knows the history, quality and technical nuances of every used machine offered.
- CMS has the infrastructure and the personnel-related resources for the testing and customer-specific revision of the used machines
- CMS has direct access to original parts, drawings and documentation
- CMS tests the function and the geometric accuracy with the latest measurement methods and delivers quality that is equivalent to that of new machine tools
- CMS can produce sample parts time studies
- If required, CMS will take over technical support, such as transportation and commissioning
- Upon request, CMS offers the same services, which are the norm in the new machine business at CHIRON and STAMA
- CMS knows the market value of the machines and calculates the purchase and sales prices fairly and accordingly.

Ready to face new challenges

The CMS team
Managing Director: Rui Böniger (centre)

Quality through qualification.

At CMS, continuously trained specialists for machine construction, automation, control/drive technology and software constantly strive for the highest quality - ranging from the evaluation and condition analysis of used machines, to repair and maintenance, all the way to the professional implementation of extensive rebuilding and modernization measures. Furthermore, CMS offers - in close cooperation within the CHIRON group of companies - all used machine customers full services, such as training, the telephone hotline, customer service, preventive maintenance and service packages, upon request.

CMS - your reliable partner

Ready to face new challenges

**Used machine tools ...
as good as new**

- Sale and purchase
- Modernization
- Retrofitting & Rebuilding
- Rent a machine
- Rapid Prototyping
- Service

Your entry to the CHIRON-STAMA class

Before modernization ...

... after modernization

CMS - Services

Real values:

CHIRON and STAMA make solid, long-lasting machine construction their priority. The „entry costs“ are worth the investment long-term thanks to long-lasting precision and reliability - both are preconditions for worthwhile retrofitting.

Within the CHIRON group, CMS is the specialist for used machining centres from CHIRON and STAMA. CMS not only offers the largest selection of used machines worldwide for these two international trademarks, upon request, CMS customers can take advantage of the same services offered

to new machine customers of the CHIRON group. Besides the buying and selling of used machines, CMS is also your partner for leasing, searching and procuring, as well as professionally rebuilding and modernizing used CHIRON and STAMA machining centres.

Modernization Additional benefit with higher performance

When people experience new things, they become wiser and more interesting. Unfortunately, this does not apply to machines. This is normal, but it is far from desirable if the performance of your machine tool no longer fulfills new tasks.

To increase the productivity and secure the value of your machine, our specialists would be pleased to provide advice on the best configuration and execute your order according to your specific requirements. CMS spruces up your old machining centre again, quickly and at low cost. Professionally executed repairs, regular maintenance, or even selective rebuilds increase the reliability, prolong the period of use and maintain the resale value of your machines. If you should really have no further use for a machine in your company, CMS would be happy to make you a fair offer to repurchase it.

Retrofitting & Rebuilding Make new from old

When it comes to retrofitting, selective rebuilding or tested quality, we trust CHIRON and STAMA original parts.

CMS has access to drawings, documentation and original accessories, so that many equipment options available „ex works“, as well as solutions from third-party providers, can be installed or attached later.

Therefore, you can be sure that your machining centre will produce profitably and longer than expected. And you can benefit from the same full service that is offered to customers of new machines – on site.

Rent a machine Renting new and used machines

You need additional production capacity on short notice? You must bridge over the repair of existing machines or the delivery times of new ones? You want to maintain reserve capacity?

Just rent a suitable machining centre! CMS offers a large selection of used machines, which can be delivered on short notice. Upon request, CMS will take over the transportation, installation, as well as commissioning, and, of course, also offers professional service according to your needs for all rented machines.

The cost-effective CMS leasing rates are, of course, also well suited for putting the qualities of the used machines to the acid test under real world conditions.

Rapid prototyping The quickest way to make your ideas concrete

The production cycles are becoming shorter and shorter, and so is the span between the idea for a product to its development to series production. With CMS, you can quickly manufacture low-cost prototypes to reduce the development time of your product and, consequently, save time and money. You can make use of this special service from CMS in the following situations:

- Production of sample parts and the related initial sampling inspection with statistics and evaluations
- Bridging downtimes in case of modernization, retrofitting and rebuilding
- Executing a customer order at short notice before the delivery date of a new CHIRON or STAMA machining centre
